■ VANE PUMP

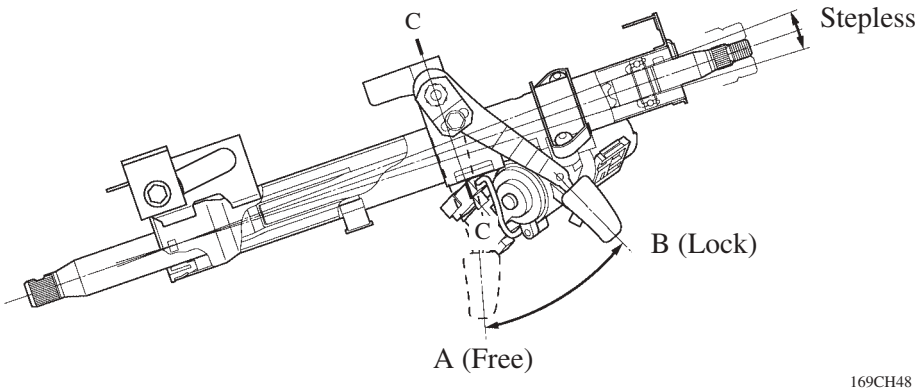

A compact and lightweight vane pump, which uses diecast aluminum as the material for its housing, has been adopted. By optimizing its internal construction, low fuel consumption and low noise have been achieved.

■ TILT STEERING

The tilt mechanism mainly consists of a tilt lever, steering column tube attachment, breakaway bracket, tilt lever lock bolt and tilt steering stoppers.
When the tilt mechanism is in its locked state, the tilt lever at B position causes the cam of the tilt steering stoppers to tighten the steering column tube attachment.
When the tilt mechanism is in its free state, the tilt lever at A position causes the cam of the tilt steering stoppers to loosen the steering column tube attachment.
