INTERIOR DESIGN

- **Combining a sporty and open-air feel, a crossover cockpit design that reveals the fun of driving has been adopted.**
- **The interior gives a dramatic impact through its bold and modern design, in which the driving functions are emphasized, and all the areas you see and touch have been designed with particular detail.**

INSTRUMENT PANEL

The instrument panel provides a space configuration that combines the feeling of openness (in which both the driver's and the front passenger's seats maintain an equal relationship) and support.

- Within its roundish-theme configuration, the instrument panel contains a high-density layout of its visual and operation functions.

COMBINATION METER

A compact and functional three-lens, independent meter configuration consisting of perpendicular indicators and amber-colored numbers that express sportiness, with LCDs (Liquid Crystal Displays) and a silver inner plate that express innovation, has been adopted.

- To ensure visibility, the speedometer and the tachometer are illuminated not only during nighttime driving, but during the daytime as well.
- The fuel gauge, temperature gauge, odo/tripmeter, and the A/T shift indicator are collectively displayed on a large LCD.

TRIMS AND GARNISHES

The trims have adopted a bold, modern, high contrast, and a graphical design that emphasizes the functional components such as the armrests and the door grips.

- The armrests are provided with a soft pad that softens the contact of the occupant's elbow, thus improving the touch.
